Dear Hiring Manager,

My career has been built on one consistent skill: acting as the bridge between business teams and technology — translating operational problems into structured requirements, technology-enabled use cases, and systems that people actually adopt.

The most demanding requirements environment I have worked in was IDDAC — a centrally-funded government analytics platform for the Tribal Development Department, Government of Maharashtra. Serving nearly 10 million beneficiaries across 29 project offices, the assignment required managing stakeholder alignment across 35+ government touchpoints, from Secretary and Commissioner level down to district implementation teams. I facilitated structured requirement workshops, produced AS-IS/TO-BE system process documentation, defined user stories and acceptance criteria, and coordinated across multiple IS vendors to ensure requirement consistency from definition through to deployment. I also developed process documentation and conducted end-user awareness sessions to support system adoption.

At Opine Group, deployed at Sarvatra Technologies (BFSI/Fintech), I was the sole on-site BA and BI resource — independently managing the full delivery lifecycle from requirement workshops and gap analysis through to advising the technical team on expected system behaviour, designing and executing functional test scenarios, managing defects through to remediation, and obtaining formal stakeholder sign-off. Good BA work is not just about gathering requirements — it is about staying in the delivery chain long enough to ensure the system actually does what the business asked for.

At Brintons Carpets, a UK-headquartered global carpets manufacturer, I led root cause analysis investigations, owned the KPI reporting framework reporting directly to the Executive Director of Group Operations, and developed SOPs enabling cross-functional teams to operate within defined quality and compliance standards.

I am drawn to roles where rigorous requirements thinking, genuine stakeholder engagement, and technical credibility all have to coexist — and where the BA is expected to stay with the delivery, not hand off and disappear. I would welcome the opportunity to discuss how my experience can contribute to your team.

Thank you for your consideration.

Sincerely,
Abhishek Kininge
